E Vitamin 60 UI/kg. C Vitamin 150 mg/kg. B1 Vitamin 10 mg/kg. K Vitamin 2 mg/kg. Copper 10 mg/kg. Zinc 96 mg/kg. Iron 80 mg/kg. Selenium 0,24 mg/kg. Manganese 93 mg/kg. Iodine 2 mg/kg. L-Lysine 22 g/kg. DL-Methionine 5,4 mg/kg. Taurine 2000 mg/kg. Antioxidants.

Instructions of use

During the first weeks of life, it is better to give the milk from a feeding bottle. Drill the nipple with a razor or a pair of scissors according to the desired flow rate. The milk can then be distributed in a saucer, as soon as the puppy/kitten will be able to lap alone (3rd week). From 3 to 4 weeks of life, start a gradual transition, mixing milk with special food for growth, for a smooth weaning.

Prepare a bottle of reconstituted milk by diluting the milk powder in warm water (35-40°C).

1 Pour the milk powder to 25 ml (corresponding to 15 g of milk powder).

2 Add gradually warm water until reaching 60 ml (corresponding to 35 ml of water) (graduation "water" on the bottle).

3 Stir until it is well mixed. The prepared milk can be kept half a day in the refrigerator. In this case, do not forget to warm it up before distribution. Store in a clean, dry place. (1 tablespoon = 5 g)

Storage instructions: to preserve the qualities of Pro-Nutrition Flatazor suckling complete food, store it in a cold, dark, and dry place.
